In the last years triangle meshes have become increasingly popular and are nowadays intensively used in many different areas of computer graphics and geometry processing. In classical CAGD irregular triangle meshes developed into a valuable alternative to traditional spline surfaces, since their conceptual simplicity allows for more flexible and highly efficient processing.

A taxonomy of Data Grids for distributed data sharing, management, and processing

Publisher: ACM Press

Full text available: pdf(1.70 MB)

Additional Information: full citation, abstract, references, index terms

Data Grids have been adopted as the next generation platform by many scientific communities that need to share, access, transport, process, and manage large data collections distributed worldwide. They combine high-end computing technologies with high-performance networking and wide-area storage management techniques. In this article, we discuss the key concepts behind Data Grids and compare them with other data sharing and distribution paradigms such as content delivery networks, peer-to-peer n ...

TinyDB: an acquisitional query processing system for sensor networks

Samuel R. Madden, Michael J. Franklin, Joseph M. Hellerstein, Wei Hong March 2005 ACM Transactions on Database Systems (TODS), Volume 30 Issue 1

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index terms, Full text available: pdf(1.67 MB) review

We discuss the design of an acquisitional query processor for data collection in sensor networks. Acquisitional issues are those that pertain to where, when, and how often data is physically acquired (sampled) and delivered to query processing operators. By focusing on the locations and costs of acquiring data, we are able to significantly reduce power consumption over traditional passive systems that assume the a priori existence of data. We discuss simple extensions to SQL for controlli ...

Content 6 - video search: Semantic concept-based query expansion and re-ranking for

multimedia retrieval

Apostol (Paul) Natsev, Alexander Haubold, Jelena Tešić, Lexing Xie, Rong Yan September 2007 Proceedings of the 15th international conference on Multimedia **MULTIMEDIA '07**

Publisher: ACM Press

Full text available: pdf(521.20 KB) Additional Information: full citation, abstract, references, index terms

We study the problem of semantic concept-based query expansion and re-ranking for multimedia retrieval. In particular, we explore the utility of a fixed lexicon of visual semantic concepts for automatic multimedia retrieval and re-ranking purposes. In this paper, we propose several new approaches for query expansion, in which textual keywords, visual examples, or initial retrieval results are analyzed to identify the most relevant visual concepts for the given query. These concepts are then u ...

Classification and machine learning: Large scale semi-supervised linear SVMs Vikas Sindhwani, S. Sathiya Keerthi

August 2006 Proceedings of the 29th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '06

Publisher: ACM Press

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>cited by</u>, <u>index</u> Full text available: pdf(258.81 KB)

Large scale learning is often realistic only in a semi-supervised setting where a small set of labeled examples is available together with a large collection of unlabeled data. In many information retrieval and data mining applications, linear classifiers are strongly preferred because of their ease of implementation, interpretability and empirical performance. In this work, we present a family of semi-supervised linear support vector classifiers that are designed to handle partially-labeled spa ...

Learning the user's semantics for CBIR involves two different sources of information: the similarity relations entailed by the content-based features, and the relevance relations specified in the feedback. Given that, we propose an augmented relation embedding (ARE) to map the image space into a semantic manifold that faithfully grasps the user's preferences. Besides ARE, we also look into the issues of selecting a good feature set for improving the retrieval performance. With thes ...

10 Abstracts from math programming symposium

Michael Grigoriadis

April 1974 ACM SIGMAP Bulletin, Issue 16

Publisher: ACM Press

Full text available: pdf(2.70 MB) Additional Information: full citation, abstract

About half of the abstracts were published in the last Newsletter. In this issue we present the remaining ones. Each author was invited to update his abstract following his oral presentation to include the latest ideas. The updated abstracts were used when available, otherwise the original abstracts were used. Where an abstract are multiple authors to a paper, the one giving the paper is underlined and the address refers to that author.

7 A corpus analysis approach for automatic query expansion and its extension to

multiple databases

Susan Gauch, Jianying Wang, Satya Mahesh Rachakonda

July 1999 ACM Transactions on Information Systems (TOIS), Volume 17 Issue 3

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(111.47 KB)

Searching online text collections can be both rewarding and frustrating. While valuable information can be found, typically many irrelevant documents are also retrieved, while many relevant ones are missed. Terminology mismatches between the user's query and document contents are a main cause of retrieval failures. Expanding a user's query with related words can improve search performances, but finding and using related words is an open problem. This research uses corpus analysis technique ...

Generation and search of clustered files

G. Salton, A. Wong

December 1978 ACM Transactions on Database Systems (TODS), Volume 3 Issue 4

Publisher: ACM Press

Full text available: pdf(1.78 MB)

Additional Information: full citation, abstract, references, citings, index

A classified, or clustered file is one where related, or similar records are grouped into classes, or clusters of items in such a way that all items within a cluster are jointly retrievable. Clustered files are easily adapted to broad and narrow search strategies, and simple file updating methods are available. An inexpensive file clustering method applicable to large files is given together with appropriate file search methods. An abstract model is then introduced to predict the retrieval ...

Shape-based retrieval and analysis of 3D models

Thomas Funkhouser, Michael Kazhdan

August 2004 ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04

Publisher: ACM Press

Full text available: pdf(12.56 MB) Additional Information: full citation, abstract

Large repositories of 3D data are rapidly becoming available in several fields, including mechanical CAD, molecular biology, and computer graphics. As the number of 3D models grows, there is an increasing need for computer algorithms to help people find the interesting ones and discover relationships between them. Unfortunately, traditional textbased search techniques are not always effective for 3D models, especially when queries are geometric in nature (e.g., find me objects that fit into thi ...

3 Term clustering of syntactic phrases

D. D. Lewis, W. B. Croft

December 1989 Proceedings of the 13th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '90

Publisher: ACM Press

Full text available: pdf(1.62 MB)

Additional Information: full citation, abstract, references, citings, index terms.

Term clustering and syntactic phrase formation are methods for transforming natural language text. Both have had only mixed success as strategies for improving the quality

of text representations for document retrieval. Since the strengths of these methods are complementary, we have explored combining them to produce superior representations. In this paper we discuss our implementation of a syntactic phrase generator, as well as our preliminary experiments with producing phrase clusters. Th ...

The automatic generation of extended queries

December 1989 Proceedings of the 13th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '90

Publisher: ACM Press

Full text available: pdf(1.09 MB)

Additional Information: full citation, abstract, references, citings, index terms

In the extended vector space model, each document vector consists of a set of subvectors representing the multiple concepts or concept classes present in the document. Typical information concepts, in addition to the usual content terms or descriptors, include author names, bibliographic links, etc. The extended vector space model is known to improve retrieval effectiveness. However, a major impediment to the use of the extended model is the construction of an extended guer ...

5 Parallel text search methods

Gerard Salton, Chris Buckley February 1988 Communications of the ACM, Volume 31 Issue 2

Publisher: ACM Press

Full text available: pdf(1.53 MB)

Additional Information: full citation, abstract, references, citings, index terms, review

A comparison of recently proposed parallel text search methods to alternative available search strategies that use serial processing machines suggests parallel methods do not provide large-scale gains in either retrieval effectiveness or efficiency.

6 A cluster-based approach to thesaurus construction

C. J. Crouch

May 1988 Proceedings of the 11th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '88

Publisher: ACM Press

Full text available: pdf(958.11 KB)

Additional Information: full citation, abstract, references, citings, index

The importance of a thesaurus in the successful operation of an information retrieval system is well recognized. Yet techniques which support the automatic generation of thesauri remain largely undiscovered. This paper describes one approach to the automatic generation of global thesauri, based on the discrimination value model of Salton, Yang, and Yu and on an appropriate clustering algorithm. This method has been implemented and applied to two document collections. Preliminary results ind ...

7 Content 4: image analysis and retrieval: Formulating context-dependent similarity

functions

Gang Wu, Edward Y. Chang, Navneet Panda

November 2005 Proceedings of the 13th annual ACM international conference on Multimedia MULTIMEDIA '05

Publisher: ACM Press

Full text available: pdf(247.27 KB) Additional Information: full citation, abstract, references, index terms

Tasks of information retrieval depend on a good distance function for measuring similarity between data instances. The most effective distance function must be formulated in a context-dependent (also application-, data-, and user-dependent) way. In this paper, we present a novel method, which learns a distance function by capturing the nonlinear relationships among contextual information provided by the application, data, or user. We show that through a process called the "kernel trick," such no ...

8 GIOSS: text-source discovery over the Internet

Luis Gravano, Héctor García-Molina, Anthony Tomasic

June 1999 ACM Transactions on Database Systems (TODS), Volume 24 Issue 2

Publisher: ACM Press

Full text available: pdf(230.37 KB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> <u>terms</u>, <u>review</u>

The dramatic growth of the Internet has created a new problem for users: location of the relevant sources of documents. This article presents a framework for (and experimentally analyzes a solution to) this problem, which we call the text-source discovery problem. Our approach consists of two phases. First, each text source exports its contents to a centralized service. Second, users present queries to the service, which returns an ordered list of promising text sources. T ...

10 Cluster ensembles --- a knowledge reuse framework for combining multiple partitions

Alexander Strehl, Joydeep Ghosh

March 2003 The Journal of Machine Learning Research, Volume 3

Publisher: MIT Press

Full text available: pdf(842.50 KB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

This paper introduces the problem of combining multiple partitionings of a set of objects into a single consolidated clustering *without* accessing the features or algorithms that determined these partitionings. We first identify several application scenarios for the resultant 'knowledge reuse' framework that we call *cluster ensembles*. The cluster ensemble problem is then formalized as a combinatorial optimization problem in terms of shared mutual information. In addition to a direct ...

21 Web mining with search engines: A web-based kernel function for measuring the

similarity of short text snippets Mehran Sahami, Timothy D. Heilman

May 2006 Proceedings of the 15th international conference on World Wide Web WWW '06

Publisher: ACM Press

Full text available: pdf(198.64 KB)

Additional Information: full citation, abstract, references, cited by, index terms

Determining the similarity of short text snippets, such as search queries, works poorly with traditional document similarity measures (e.g., cosine), since there are often few, if any, terms in common between two short text snippets. We address this problem by introducing a novel method for measuring the similarity between short text snippets (even those without any overlapping terms) by leveraging web search results to provide greater context for the short texts. In this paper, we define such a ...

This article addresses search engine personalization. We present a new approach to mining a user's preferences on the search results from clickthrough data and using the discovered preferences to adapt the search engine's ranking function for improving search quality. We develop a new preference mining technique called *SpyNB*, which is based on the practical assumption that the search results clicked on by the user reflect the user's preferences but does not draw any conclusions about t ...

We present a novel approach to pseudo-feedback-based ad hoc retrieval that uses language models induced from both documents and clusters. First, we treat the pseudo-feedback documents produced in response to the original query as a set of *pseudo-query* that themselves can serve as input to the retrieval process. Observing that the documents returned in response to the pseudo-query can then act as pseudo-query for subsequent rounds, we arrive at a formulation of pseudo-query-based retrieval ...

A corpus analysis approach for automatic query expansion and its extension to multiple databases

Susan Gauch, Jianying Wang, Satya Mahesh Rachakonda

July 1999 ACM Transactions on Information Systems (TOIS), Volume 17 Issue 3

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(111.47 KB) terms

Searching online text collections can be both rewarding and frustrating. While valuable information can be found, typically many irrelevant documents are also retrieved, while many relevant ones are missed. Terminology mismatches between the user's query and document contents are a main cause of retrieval failures. Expanding a user's query with related words can improve search performances, but finding and using related words is an open problem. This research uses corpus analysis technique ...

28 <u>TextTiling: segmenting text into multi-paragraph subtopic passages</u>

Marti A. Hearst

March 1997 Computational Linguistics, Volume 23 Issue 1

Publisher: MIT Press

Full text available: pdf(2.46 MB) Additional Information: full citation, abstract, references, citings

TextTiling is a technique for subdividing texts into multi-paragraph units that represent passages, or subtopics. The discourse cues for identifying major subtopic shifts are patterns of lexical co-occurrence and distribution. The algorithm is fully implemented and is shown to produce segmentation that corresponds well to human judgments of the subtopic boundaries of 12 texts. Multi-paragraph subtopic segmentation should be useful for many text analysis tasks, including information retrieval and ...

29 Efficiency: Pruned query evaluation using pre-computed impacts

Vo Ngoc Anh, Alistair Moffat

August 2006 Proceedings of the 29th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '06

Publisher: ACM Press

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>cited by</u>, <u>index</u> Full text available: pdf(184.64 KB) terms

Exhaustive evaluation of ranked queries can be expensive, particularly when only a small subset of the overall ranking is required, or when queries contain common terms. This concern gives rise to techniques for dynamic query pruning, that is, methods for eliminating redundant parts of the usual exhaustive evaluation, yet still generating a demonstrably "good enough" set of answers to the query. In this work we propose new pruning methods that make use of impact-sorted indexes. Compared to exhau ...

30 Language models: Corpus structure, language models, and ad hoc information

Oren Kurland, Lillian Lee

July 2004 Proceedings of the 27th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '04

Publisher: ACM Press

Full text available: pdf(214.33 KB)

Additional Information: full citation, abstract, references, citings, index

Most previous work on the recently developed language-modeling approach to information retrieval focuses on document-specific characteristics, and therefore does not take into account the structure of the surrounding corpus. We propose a novel algorithmic framework in which information provided by document-based language models is enhanced by the incorporation of information drawn from clusters of similar documents.

31 A dependence maximization view of clustering

Le Song, Alex Smola, Arthur Gretton, Karsten M. Borgwardt

June 2007 Proceedings of the 24th international conference on Machine learning **ICML '07**

Publisher: ACM Press

Full text available: pdf(611.23 KB) Additional Information: full citation, abstract, references

We propose a family of clustering algorithms based on the maximization of dependence between the input variables and their cluster labels, as expressed by the Hilbert-Schmidt Independence Criterion (HSIC). Under this framework, we unify the geometric, spectral, and statistical dependence views of clustering, and subsume many existing algorithms as special cases (e.g. k-means and spectral clustering). Distinctive to our framework is that kernels can also be applied on the labels, which ...

June 1985 Proceedings of the 8th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '85

Publisher: ACM Press

Full text available: pdf(1.03 MB) Additional Information: full citation, abstract, references, citings

Experimental information retrieval (IR) systems, some dating back to the sixties, have demonstrated the viability of fully automatic document storage and retrieval methodologies with small to medium size bibliographic collections [72]. Many of these experimental systems utilize the vector space model in which each important term (such as a word stem) identifies a different dimension in a space, so that matrix methods and vector operations can be defined on queries and documents. Statistical ...

34 <u>Performance issues and error analysis in an open-domain question answering</u>

system

Dan Moldovan, Marius Paşca, Sanda Harabagiu, Mihai Surdeanu April 2003 ACM Transactions on Information Systems (TOIS), Volume 21 Issue 2

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(270.12 KB) terms

This paper presents an in-depth analysis of a state-of-the-art Question Answering system. Several scenarios are examined: (1) the performance of each module in a serial baseline system, (2) the impact of feedbacks and the insertion of a logic prover, and (3) the impact of various retrieval strategies and lexical resources. The main conclusion is that the overall performance depends on the depth of natural language processing resources and the tools used for answer finding.

36 Navigating within the data: VINETA: navigation through virtual information spaces

Uwe Krohn

May 1996 Proceedings of the workshop on Advanced visual interfaces AVI '96

Publisher: ACM Press

Full text available: pdf(2.31 MB)

Additional Information: full citation, abstract, references, citings

Vineta is a system prototype allowing navigation through bibliographic data without the typing and revising of keyword-based queries. Our approach to visualizing documents and terms in navigational retrieval includes the representation of documents and terms as graphical objects, and dynamic positioning of these objects in the 3D virtual navigation space. Users can navigate through this virtual navigation space examining individual documents and clusters of documents at various levels of detail. ...

37 Reviewed articles: Estimating network proximity and latency

Puneet Sharma, Zhichen Xu, Sujata Banerjee, Sung-Ju Lee

July 2006 ACM SIGCOMM Computer Communication Review, Volume 36 Issue 3

Publisher: ACM Press

Full text available: pdf(2.49 MB) Additional Information: full citation, abstract, references, index terms

Network proximity and latency estimation is an important component in discovering and locating services and applications. With the growing number of services and service providers in the large-scale Internet, accurately estimating network proximity/latency with minimal probing overhead becomes essential for scalable deployment. Although there exist a number of network distance estimation schemes, they either rely on extensive infrastructure support, require the IP address of the potential target ...

Reeb graphs have been shown to be effective for topology matching of 3D objects. Their effectiveness breaks down, however, when the individual models become very geometrically and topologically detailed---as is the case for complex machined parts. The result is that Reeb graph techniques, as developed for matching general shape and computer graphics models, produce poor results when directly applied to create engineering databases. This paper presents a framework for shape matching through scale- ...

We consider the problem of indexing high-dimensional data for answering (approximate) similarity-search queries. Similarity indexes prove to be important in a wide variety of settings: Web search engines desire fast, parallel, main-memory-based indexes for similarity search on text data; database systems desire disk-based similarity indexes for high-dimensional data, including text and images; peer-to-peer systems desire distributed similarity indexes with low communication cost. We propose an i ...

41 Effective information retrieval using term accuracy

C. T. Yu, G. Salton

March 1977 Communications of the ACM, Volume 20 Issue 3

Publisher: ACM Press

Full text available: pdf(799.09 KB) Additional Information: full citation, abstract, references, citings

The performance of information retrieval systems can be evaluated in a number of different ways. Much of the published evaluation work is based on measuring the retrieval performance of an average user query. Unfortunately, formal proofs are difficult to construct for the average case. In the present study, retrieval evaluation is based on optimizing the performance of a specific user query. The concept of query term accuracy is introduced as the probability of occurrence of a query term in ...

42 Paper session I: techniques: Multi-vector feature space based on pseudo-euclidean

June 2004 Proceedings of the 1st international workshop on Computer vision meets databases CVDB '04

Publisher: ACM Press

Full text available: pdf(746.64 KB) Additional Information; full citation, abstract, references, citings

Investigators have tried to increase the precision of similarity searches of images by using distance functions that reflect the similarity of features. When the quadratic-form distance is used, however, dissimilar images can be judged to be similar. We therefore propose that the similarity of images be evaluated using a measure of distance in a multi-vector feature space based on pseudo-Euclidean space and an oblique basis (MVPO). In this space an image is represented by a set of vectors each o ...

Learning the user's semantics for CBIR involves two different sources of information: the similarity relations entailed by the content-based features, and the relevance relations specified in the feedback. Given that, we propose an augmented relation embedding (ARE) to map the image space into a semantic manifold that faithfully grasps the user's preferences. Besides ARE, we also look into the issues of selecting a good feature set for improving the retrieval performance. With thes ...

Full text available: pdf(295.98 KB) Additional Information: full citation, abstract, references, index terms

Query suggestion aims to suggest relevant queries for a given query, which help users better specify their information needs. Previously, the suggested terms are mostly in the same language of the input query. In this paper, we extend it to cross-lingual query suggestion (CLQS): for a query in one language, we suggest similar or relevant queries in other languages. This is very important to scenarios of cross-language information retrieval (CLIR) and cross-lingual keyword bidding for search e ...

The Internet provides a wealth of useful information in a vast number of dynamic information sources, but it is difficult to determine which sources are useful for a given query. Most existing techniques either require explicit source cooperation (for example, by exporting data summaries), or build a relatively static source characterization (for example, by assigning a topic to the source). We present a system, called <I>InfoBeacons</I>, that takes a different approach: data and sou ...

1. Two-handed volumetric document corpus management

Ebert, D.S.; Zwa, A.; Miller, E.L.; Shaw, C.D.; Roberts, D.A.;

Select All Deselect All

Computer Graphics and Applications, IEEE

Volume 17, Issue 4, July-Aug. 1997 Page(s):60 - 62

Digital Object Identifier 10.1109/38.595271

AbstractPlus | References | Full Text: PDF(120 KB) | IEEE JNL

Rights and Permissions

2. Uncertainty principles and ideal atomic decomposition

Donoho, D.L.; Huo, X.;

Information Theory, IEEE Transactions on

Volume 47, Issue 7, Nov. 2001 Page(s):2845 - 2862

Digital Object Identifier 10.1109/18.959265

AbstractPlus | References | Full Text: PDF(624 KB) | IEEE JNL

Rights and Permissions

3. A geometric approach to shape from defocus

Favaro, P.; Soatto, S.;

Pattern Analysis and Machine Intelligence, IEEE Transactions on

Volume 27, Issue 3, March 2005 Page(s):406 - 417

Digital Object Identifier 10.1109/TPAMI.2005.43

AbstractPlus | References | Full Text: PDF(1616 KB) | IEEE JNL

Rights and Permissions

4. Dimensionality reduction by random mapping: fast similarity computation for clustering

Kaski, S.:

Neural Networks Proceedings, 1998. IEEE World Congress on Computational Intelligence. The

1998 IEEE International Joint Conference on

Volume 1, 4-9 May 1998 Page(s):413 - 418 vol.1

Digital Object Identifier 10.1109/IJCNN.1998.682302

AbstractPlus | Full Text: PDF(560 KB) IEEE CNF

Rights and Permissions

5. Relational algorithms for theoretical and empirical evaluation of systems of fuzzy connectives

Kohout, L.J.; Eunjin Kim;

Fuzzy Systems, 1996., Proceedings of the Fifth IEEE International Conference on

Volume 2, 8-11 Sept. 1996 Page(s):918 - 922 vol.2

Digital Object Identifier 10.1109/FUZZY.1996.552301

AbstractPlus | Full Text: PDF(468 KB) | IEEE CNF

Rights and Permissions

6. Model and optimal filtering of linearly-additive spatially-invariant continuousmeasurement imaging

Youngin Shin Oh; Farison, J.B.;

<u>Circuits and Systems, 1996. ISCAS '96., 'Connecting the World'., 1996 IEEE International Symposium on</u>

Volume 2, 12-15 May 1996 Page(s):715 - 717 vol.2 Digital Object Identifier 10.1109/ISCAS.1996.541825

AbstractPlus | Full Text: PDF(196 KB) IEEE CNF
